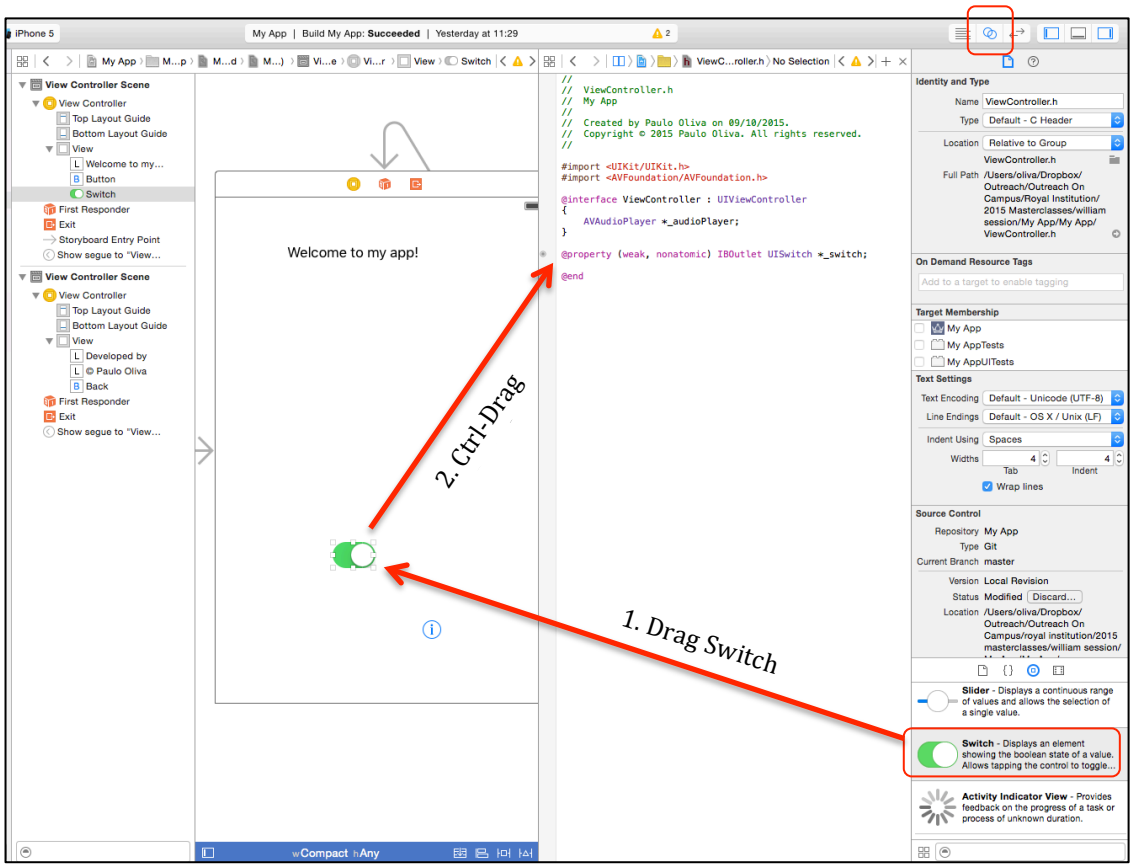
Session 4 : Pause and restart animation/sound

1. Add a Switch to the main View Controller **assistant editor**



2. Control-drag from new switch to ViewController.h (use **assistant editor**) (call it _switch)
3. Move the definition of imagesNames, images, and animationImageView to just after @implementation ViewController (in ViewController.m)

```
NSArray *imageNames;

NSMutableArray *images;

UIImageView *animationImageView;
```

4. Add @synthesize _switch; to ViewController.m, so it looks like this:

```
#import "ViewController.h"

@interface ViewController ()

@end

@implementation ViewController

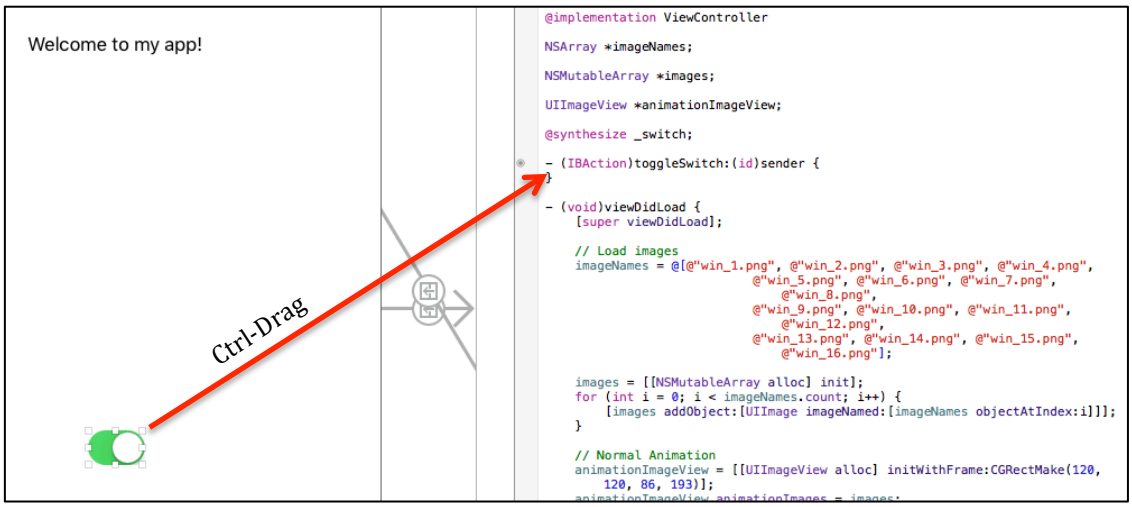
NSArray *imageNames;

NSMutableArray *images;

UIImageView *animationImageView;

@synthesize _switch;
```

5. Control-drag from new switch to ViewController.m in position shown



6. In ViewController.m also add the following code to toggleSwitch method:

```
- (IBAction)toggleSwitch:(id)sender {
    if ([_switch isOn])
    {
        [_audioPlayer play];
        [animationImageView startAnimating];
    }
    else
    {
        [_audioPlayer pause];
        [animationImageView stopAnimating];
        animationImageView.image = [images objectAtIndex: 0];
    }
}
```

7. Test your app. You should be able to pause and restart sound/animation!
